Guest Author Guidelines for Wildlife Capture and Care Blog **What would you like to teach new wildlife professionals?**

Global Wildlife Resources (GWR) invites you to be a guest author on our new Wildlife Capture and Care Blog. *We value what you have to share.* Help us improve wildlife capture and handling.

Entertain! Inspire! Teach!

Share your story, tool, technique, protocol or attitudes to improve animal care, efficiency in the field, or success as a wildlife professional. Blog article should be 400-600 words or so with 2 images or 1 image & 1 video (3 min max). Please provide a short bio (60 words or so) and how you wish to be cited. Author will be fully cited and bio placed at the end of the article. We invite you to provide a photo for your bio as well. If you wish, I can provide you with a Google Drive folder link to easily share your video and images.

GWR may edit your blog article for readability but author will have final say on the exact blog article posted. By providing content in the form of text, photos, and video to GWR for the blog article, the author has permission to use the content as they choose unless otherwise specified by the author. Guest articles are planned for the second week of each month depending on submissions.

Please have fun with this. What would you like to share with seasoned or aspiring wildlife professionals. What tool or technique or protocol of yours will help others? What values are important to you to improve and strengthen the culture of the wildlife profession or to be a successful wildlife professional?

Who do you know that might like being a guest author? Who is a natural teacher and a great biologist? Please share these guidelines with them.

Thank you! Contact me anytime with questions or just to visit. I am excited to have your generous participation.
