Guidelines for Contributing Visuals with Global Wildlife Resources

Global Wildlife Resources (GWR) invites you to share your wisdom and experience through images and videos (visuals) from the field working with wildlife. Help me show the world through your visuals what wildlife biologists are doing in the field and how you are practicing the highest standards in animal handling. This even includes setting up non-invasive research projects.

By sharing your photos and videos you give GWR permission to use them for our chemical capture courses, strengthening website and blog, and creating new training resources for wildlife students and professionals. In return, GWR will give you full access to all of our growing collection of training content.

Entertain! Inspire! Teach!

I am in need of hi-res images and/or videos showing all aspects of wildlife capture & handling:

- Non-invasive methods
- Darting and drug delivery systems
- Field equipment including tackle box organization, hobbles, headcovers, telemetry
- Animal handling, conducting TPRs, use of headcovers, ear tags, microchips
- Collecting blood (and processing blood in the office) and tooth collection
- Techniques and equipment need for species with special needs.
- Detecting or addressing veterinary emergencies such as injury, bloat, hyper/hypothermia.
- *Images and videos of techniques that you are most proud of.*
- *Training future biologists - what is the most important thing for them to learn with animal care and being successful with wildlife field capture and handling?*

I will give photo credits to acknowledge your valuable contribution. *Please let me know how to cite you.* Any descriptions of the photos would also be most appreciated.

We can discuss the best way to transfer image and video files - thumb drive, Google Drive, Dropbox, Amazon Drive, etc.

Thank you for considering this request. Please contact me if you have any questions. And as always, contact me any time I can be of support.

Best wishes,

Mark
